

MSN 抗原（重组蛋白）

中文名称： MSN 抗原（重组蛋白）

英文名称： MSN Antigen (Recombinant Protein)

别名： HEL70

储存： 冷冻（-20℃）

相关类别： 抗原

概述

Fusion protein corresponding to N terminal 300 amino acids of human MSN

技术规格

Full name:	moesin
Synonyms:	HEL70
Swissprot:	P26038
Gene Accession:	BC017293
Purity:	>85%, as determined by Coomassie blue stained SDS-PAGE
Expression system:	Escherichia coli
Tags:	His tag C-Terminus, GST tag N-Terminus
Background:	Moesin (for membrane-organizing extension spike protein) is a member of the ERM family which includes ezrin and radixin. ERM proteins appear to function as cross-linkers between plasma membranes and actin-based cytoskeletons. Moesin is localized to filopodia and other membranous protrusions that are important for cell-cell recognition and signaling and for cell movement. Probably involved in connections of major cytoskeletal structures to the plasma membrane. May inhibit herpes simplex virus 1 infection at an early stage.
